## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1, 2 and 4-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, Lee discloses an interference cancellation apparatus where a rank of each user is determined based on known transmission rate information of each user, but fails to disclose a plurality of interference cancellation units, where each interference cancellation unit is configured to detect the transmission rate information, and a rank updating unit configured to update the rank to be used in the interference cancellation units based on the transmission rate information detected in each of the interference cancellation units.

Regarding claim 6, Lee discloses an interference cancellation apparatus where a rank of each user is determined based on known transmission rate information of each user. Uesugi et al. Disclose an apparatus for interference rejection where an interfering user is identified using the transmission rate of the user, or a required user quality. However, the prior art of record fails to disclose estimating an incoming signal power for each user based on the known transmission rate information and the required quality information for each user, and to determine the rank of each user based on the estimated incoming signal power.

Regarding claims 13 and 14, Lee discloses an interference cancellation apparatus where a rank of each user is determined based on known transmission rate information of each user, but fails to disclose a rank updating unit for users whose transmission rate is unknown, configured to update a rank to be used in interference cancellation units based on transmission rate information detected by interference cancellation units.
